09/2024 - 12/2024

A London-based startup providing software solutions, including design, development, and marketing services.
- Built the **company's official website** using **Next.js**, improving performance and SEO.
- Worked closely with designers to improve user interface (UI), user experience (UX), and overall responsiveness.

Projects

Imagify   imaginify-rho-lilac.vercel.app

Imaginfiy is an AI-powered website for image editing, featuring background removal, automatic filling, color removal, and object removal. It includes AI-based search for identifying objects in images and is built with Next.js, Tailwind CSS, Shadcn, TypeScript, and the Cloudinary API, using MongoDB for the database.

ShipPacks   shippacks.com

This project uses Next.js, Firebase, and Tailwind CSS, enabling users to place and track orders in real time. Drivers can update order statuses through a mobile app, keeping users informed about their order progress.

StoreIt   storage-management-solution.vercel.app

A secure, cloud-based platform designed for storing, managing, and sharing files, featuring seamless real-time access. It is built with Next.js, Tailwind CSS, Shadcn, TypeScript, and the Cloudinary API, using App Write.

Fynix POS   pointofsaless.netlify.app

I developed a POS system as a SaaS application designed for large retail stores. It allows users to manage various aspects of their store, including sales, purchases, and more. Essentially, it includes everything you would expect from a POS system. The application is built using React, Firebase, and Tailwind CSS.

Otoobe   https://otoobe.vercel.app/

OTOOBE is an event management platform featuring a website, mobile app, and desktop app. Users can view and filter events by category, and create their own events after signing up. The platform uses Next.js, Tailwind CSS, and ShadCN, with Firebase for authentication and database management.
